FOR IMMEDIATE RELEASE

***City of Arlington, Texas chooses CrimeWeb Network to build a citywide notification application.***

**Arlington, Texas**, July 12, 2006 - The City of Arlington, Texas has signed an agreement with CrimeWeb Network, LLC, to build a citywide email information portal using the patented CrimeWeb technology.

The system will be based on the same technology currently used by CrimeWeb.Net to distribute information to citizen from law enforcement agencies across the country. Arlington has been using that system for over a year, and is very satisfied with its performance and features.

Although the new system will be based on the same technology, the portal will be customized to allow the City of Arlington to issue general information alerts from various city departments regarding events that affect the citizens of Arlington. One specific use envisioned for the system is to keep citizens up-to-date on the construction progress of the new Dallas Cowboys stadium and relay information regarding street closures and alternate routes around the area while the construction is taking place.

Citizens will have the ability to register online (free-of-charge) to receive notification from various city departments. The registration process will allow a citizen to elect to receive alerts from all departments or only those in which they have an interest. When an alert is issued, the citizen may receive it via email, text pager, cell phone or any other web enabled device.

Completion and implementation of the system is scheduled for late August 2006.

**About CrimeWeb**

CrimeWeb is a centralized clearinghouse used by public safety agencies across the nation to distribute information to the communities they serve. The patented CrimeWeb process is the most effective method of delivering information to a targeted population of citizens.

Citizens can sign-up for free at [www.crimeweb.net](http://www.crimeweb.net) and receive specific alert types from any geographical area that interests them. CrimeWeb's patented technology and proprietary zip code engine allows a subscribing agency to distribute alerts anywhere in the country. Alerts can be sent to citizen subscribers in specific zip codes, up to 99 miles around a specific zip code or to all registered users located geographically between two zip codes
